Agaric fungus is one of the edible mushrooms found in the Salaween Peace Park, Myanmar.
Credit : Womens Research Group Karen Environmental and Social Action Network (KESAN)

Women4Biodiversity believes that 'Living in Harmony' with Nature needs to consider the roles and contributions of women and girls to achieve transformative change. This requires addressing gender equity, embracing holistic solutions and recognising women's human rights.

Women4Biodiversity's work involves building synergies around the work of the Convention on Biological Diversity (CBD), the United Nations Convention to Combat Desertification (UNCCD), and other international environmental agreements to provide direction for more coherent and inclusive processes while ensuring their proper implementation.

Through the Building Resilience and Weaving Gender-responsive Approaches to Biodiversity Governance restoration project, which commenced in late 2021, Women4Biodiversity has supported six women-led restoration processes in Argentina, Costa Rica, Cameroon, Kenya, Myanmar, and the Solomon Islands. The images in this colouring book showcase the inspiring work of the communities who have passionately dedicated their lives to the restoration process.

Women4Biodiversity is committed to championing women's and girls' rights in biodiversity conservation. Together, we can make a difference.
